"NAD, Sirtuins and Aging"

Leonard P. Guarente, Ph.D.

Professor of Biology
Massachusetts Institute of Technology

Dr. Guarente's laboratory research is centered on the genetic and molecular basis of aging, with an emphasis to mammals, mouse models and humans. His studies focus on the brain, including the importance of circadian control and aging.

This Seminar is the 2016 Roy Walford lecture, endowed in the memory of Dr. Walford to bring leaders in the biology of aging to the Los Angeles community
